

COD And Offline Refund Destination Manual QA

Scope

Use this checklist to manually verify the uncommitted return/refund changes for COD and offline refunds.

Covered changes:

- Customer web return form collects refund destination for COD/offline refund requests.
- Customer mobile return form collects the same destination.
- Refund destination supports only **UPI** and **BANK_TRANSFER**.
- Cash refund is not available in UI and is rejected by API.
- Return/refund records store destination snapshots.
- Finance/Admin refund workspace shows masked destination details.
- Finance/Admin can adjust payable refund amount within the approved cap.
- Seller deduction math uses the adjusted payable amount after refund success.
- Finance workspace includes the refunds screen.

Store Pickup Orders—COD Handling Rule:

- **Store pickup** = customer picks up order from seller's own store/location.
- Seller owns and operates the store where customer collects the order.
- For **COD store-pickup orders**: Cash is collected at the store by store staff (the seller's team).
- **Critical**: Seller CANNOT and should NOT record this COD collection via seller platform.
 - COD collection UI/fields are hidden for store-pickup mode.
 - API rejects any COD collection attempt for store-pickup orders.

How Store-Pickup COD Is Recorded:

- **Admin or Finance user** records the store-collected COD through **admin/finance workspace** (NOT seller app).
- Store-collected COD is tracked separately from seller-recorded COD collections.
- Recording happens in: **/admin/cod-collections** or **/finance/cod-collections** (independent of seller).
- Admin/Finance verifies the collected amount and marks it as paid.
- Store-collected COD is **NOT added** to:
 - Seller payout wallet
 - Seller commission calculations
 - Seller-recorded transactions
- Store-collected COD appears as **reference-only** in seller statements (e.g., "Store-collected COD at pickup: ₹X", informational only).
- **COD collection by seller** (recordable in seller app) only applies to: **MANUAL_TRANSPORT** and **THIRD_PARTY_COURIER** modes.

Test Data Needed

Prepare these orders before testing:

- COD delivered order with at least one returnable item.
- Bank-transfer or manual-payment delivered order with at least one returnable item.
- Razorpay paid delivered order with at least one returnable item.
- **Store-pickup delivered order (COD variant):** A store-pickup order where customer paid via COD (collected at the seller's store location). Test that store-pickup remains final and does not enter return/refund flow, and seller cannot record the store-collected COD.
- Seller/admin/finance accounts:
 - Customer account that owns the test orders.
 - Seller account (store owner) for approving returns and managing orders.
 - Admin or Finance account for refund processing and store-collected COD tracking.

Do not run seed/bootstrap or DB-writing scripts against staging/production unless approved.

Pre-Flight Checks

1. Confirm the migration exists:
 - `prisma/migrations/20260706143000_cod_refund_destination_finance_adjustments/migration.sql`
2. Confirm Prisma schema contains:
 - `ReturnRequest.refundDestinationSnapshot`
 - `RefundRequest.approvedAmountPaise`
 - `RefundRequest.refundDestinationSnapshot`
 - `RefundRequest.amountAdjustmentNote`
 - `RefundRequest.amountAdjustedAt`
 - `RefundRequest.amountAdjustedById`
3. Confirm finance nav includes:
 - `/finance/refunds`
4. Confirm refund UI method options do not show cash refund.

Customer Web QA

1. COD Refund Requires Destination

Steps:

1. Sign in as customer on web.
2. Open a delivered COD order.
3. Click `Request refund`.
4. Select one returnable item.
5. Leave reason blank and submit.

Expected:

- UI blocks submit and asks for a return reason.

Continue:

1. Add a valid reason.
2. Keep refund destination blank.

3. Submit.

Expected:

- UI blocks submit and asks for refund account holder or UPI/bank details.
- No return request is created.

2. COD Refund With UPI Destination

Steps:

1. On the same COD order, select **Refund**.
2. Choose **UPI**.
3. Enter account holder name.
4. Enter UPI ID.
5. Submit return request.

Expected:

- Return request submits successfully.
- Customer sees success message.
- The request appears in customer returns.
- No cash refund option is shown.

3. COD Refund With Bank Destination

Steps:

1. Open another COD delivered order.
2. Select returnable item.
3. Choose **Refund**.
4. Choose **Bank**.
5. Enter account holder name, bank name, account number, and IFSC.
6. Submit.

Expected:

- Return request submits successfully.
- IFSC is normalized to uppercase.
- No cash refund option is shown.

4. Replacement Does Not Require Refund Destination

Steps:

1. Open a COD delivered order.
2. Click **Request replacement**.
3. Select returnable item.
4. Add reason.
5. Submit without UPI/bank details.

Expected:

- Replacement request submits successfully.
- Refund destination fields are not required.

5. Razorpay Refund Does Not Require Manual Destination

Steps:

1. Open a delivered Razorpay-paid order.
2. Click **Request refund**.
3. Select returnable item.
4. Add reason.
5. Submit without UPI/bank details.

Expected:

- Return request submits successfully.
- UPI/bank refund destination section should not be required.

Customer Mobile QA

6. Mobile COD Refund Requires UPI/Bank

Steps:

1. Sign in to the customer mobile app.
2. Open a delivered COD order.
3. Start a return.
4. Select **Refund**.
5. Select an item.
6. Add reason.
7. Submit without refund destination.

Expected:

- Mobile form blocks submit with a clear validation message.
- No return request is created.

7. Mobile COD Refund With UPI

Steps:

1. Select **UPI**.
2. Enter account holder name and UPI ID.
3. Submit.

Expected:

- Return request submits successfully.
- App navigates to the return detail screen.

8. Mobile COD Refund With Bank Transfer

Steps:

1. Start a return for another COD/offline order.
2. Select **Bank**.
3. Enter account holder name, bank name, account number, and IFSC.
4. Submit.

Expected:

- Return request submits successfully.
- IFSC is uppercase.

Seller Return Approval QA

9. Seller Approves Return

Steps:

1. Sign in as seller.
2. Open seller returns.
3. Open the customer COD return request.
4. Approve the return.

Expected:

- Return moves to the expected approved/pickup/QC flow based on existing return workflow.
- Seller note behavior still works.
- No **note: undefined** error occurs.

Admin/Finance Refund QA

10. Refund Request Contains Approved Cap

Steps:

1. Complete the existing return QC/approval steps until a refund request is created.
2. Sign in as Admin or Finance.
3. Open **/admin/refunds** or **/finance/refunds**.
4. Select the refund.

Expected:

- Refund amount is visible.
- Approved cap is visible.
- Destination is visible in masked format.
- Destination does not expose raw account JSON.

11. Finance Workspace Refunds Screen

Steps:

1. Sign in as Finance user.
2. Open `/finance`.
3. Click `Refunds`.

Expected:

- `/finance/refunds` opens.
- Refund queue loads.
- Finance user can view refund detail.
- Finance user does not need full admin workspace access.

12. Cash Refund Is Not Available

Steps:

1. Open a refund detail in admin or finance refunds.
2. Open the refund method dropdown.

Expected:

- `COD Cash / Cash refund` is not listed.
- Valid manual options are `BANK_TRANSFER`, `UPI`, and `MANUAL`.

13. Manual Cash Refund API Is Rejected

Steps:

1. Use API client or browser devtools to call manual refund record endpoint with `method: "COD_CASH"`.

Expected:

- API rejects the request.
- Error says cash refunds are not supported and UPI/bank transfer should be used.
- Refund remains unpaid.

14. Adjust Payable Amount Within Cap

Steps:

1. Open a pending/approved refund.
2. Enter a payable amount lower than or equal to approved cap.
3. Enter an adjustment note.
4. Click `Adjust payable amount`.

Expected:

- Refund detail refreshes.
- `Refund amount` changes to the adjusted amount.

- **Approved cap** remains unchanged.
- Last adjustment note is visible.
- Audit log records **refund.amount_adjusted**.

15. Adjust Payable Amount Above Cap

Steps:

1. Open a pending/approved refund.
2. Enter a payable amount greater than approved cap.
3. Enter an adjustment note.
4. Submit.

Expected:

- API rejects the change.
- Refund amount remains unchanged.
- No payment transaction is created.

16. Adjustment Note Is Required

Steps:

1. Enter a valid payable amount.
2. Leave adjustment note blank.
3. Submit.

Expected:

- UI keeps the button disabled, or API rejects if called manually.
- Refund amount remains unchanged.

17. Manual UPI Refund Record

Steps:

1. Open a COD refund with UPI destination.
2. Confirm method defaults to **UPI**.
3. Enter UTR/reference.
4. Enter paid date/time.
5. Mark manual refund paid.

Expected:

- Refund status becomes **SUCCESS**.
- Refund transaction is created with method **UPI**.
- Transaction amount equals adjusted payable amount.
- Seller deduction impact is applied only after success.

18. Manual Bank Refund Record

Steps:

1. Open a COD/offline refund with bank destination.
2. Confirm method defaults to **BANK_TRANSFER**.
3. Enter bank transfer reference and paid date/time.
4. Mark manual refund paid.

Expected:

- Refund status becomes **SUCCESS**.
- Refund transaction method is **BANK_TRANSFER**.
- Transaction amount equals adjusted payable amount.

19. Destination Method Mismatch Is Rejected

Steps:

1. Open a refund with UPI destination.
2. Try to manually record payment using **BANK_TRANSFER**.

Expected:

- API rejects the request.
- Error says refund must be recorded through the stored destination method.
- Refund remains unpaid.

Regression QA

20. Razorpay Refund Still Uses Gateway Flow

Steps:

1. Open a Razorpay refund request.
2. Approve the refund.
3. Initiate Razorpay refund.

Expected:

- Razorpay initiation still works.
- Manual destination is not required.
- Gateway transaction is created.

21. Completed Refund Cannot Be Adjusted

Steps:

1. Open a **SUCCESS** refund.
2. Try to adjust amount through UI or API.

Expected:

- UI disables adjustment or API rejects it.
- Completed transaction remains unchanged.

22. Store Pickup Remains Final After Delivered

Steps:

1. Open a delivered store-pickup order on web and mobile.

Expected:

- Return/refund buttons do not appear.
- Cancel/return/refund actions are not shown after store pickup is delivered.

23. Existing Return Quality Images Still Work

Steps:

1. Submit a return with quality images.

Expected:

- Up to 2 images upload.
- Return request stores quality image keys.
- Refund destination behavior still works with uploaded images.

24. Store Pickup COD Not Collectible by Seller

Steps:

1. Open a delivered **store-pickup COD order** on seller mobile app (order where customer paid via COD at the seller's store).
2. Try to enter delivery/pickup completion or check if COD collection field appears.

Expected:

- Mobile seller app does NOT show "COD collected" or "COD collection amount" input fields for store-pickup mode.
- COD field is hidden specifically for **STORE_PICKUP** delivery mode.
- Only **MANUAL_TRANSPORT** and **THIRD_PARTY_COURIER** modes show COD collection option.
- Store-pickup COD is admin/finance responsibility only.
- Seller statement shows store-collected COD as reference only (not added to sellable/payable amount).

25. Admin Records Store-Pickup COD Collection

Steps:

1. Sign in as **Admin** or **Finance** user.
2. Navigate to **COD Collections** workspace (</admin/cod-collections> or </finance/cod-collections>).

3. Find the delivered **store-pickup COD order** (the same order from test case #24).
4. Open the order and record:
 - Amount collected (same as order COD amount or adjusted).
 - Reference/receipt number from store.
 - Date and time collected.
 - Collection note (e.g., "Collected at store counter").
5. Verify collection and mark as **PAID**.

Expected:

- Admin/Finance can open and record COD collection for store-pickup orders.
- Collection is recorded in admin workspace, **NOT** through seller app.
- Order payment status changes to **PAID** after admin verification.
- Seller cannot see or edit this COD collection in seller workspace.
- Store-pickup order's COD appears in seller statement as **reference/informational only** (not added to sellable amount).
- Audit log records: **cod_collection.recorded** from admin/finance user, not seller.

Database Spot Checks

Run read-only checks against a safe local/dev database:

```
SELECT request_number, refund_destination_snapshot
FROM return_requests
WHERE refund_destination_snapshot IS NOT NULL
ORDER BY created_at DESC
LIMIT 10;
```

Expected:

- COD/offline refund requests store UPI or bank destination JSON.

```
SELECT refund_number, amount_paise, approved_amount_paise,
refund_destination_snapshot, amount_adjustment_note
FROM refund_requests
WHERE refund_destination_snapshot IS NOT NULL
ORDER BY created_at DESC
LIMIT 10;
```

Expected:

- **approved_amount_paise** holds the original approved cap.
- **amount_paise** holds the current payable amount.
- Adjusted refunds have **amount_adjustment_note**.

Manual Sign-Off

Record results:

Area	Result	Notes
Web COD UPI return	Pending	
Web COD bank return	Pending	
Mobile COD UPI return	Pending	
Mobile COD bank return	Pending	
Seller approval	Pending	
Finance refund queue	Pending
